

## LG Commercial BBQ

Before using the BBQ please ensure you read the below safety instructions.

### **Before lighting**

1. Be sure the BBQ is at least 200mm away from any surface.
2. The unit should be levelled, with a slight incline to the front to be sure that the fat runs into the front valley. Place liquid collecting container (metal can or similar) under the spout, in the holder, on the front of the unit. Ensure container is properly located so that it cannot be accidentally dislodged.
3. Turn gas burner controls to the OFF position.
4. Turn on valve at the gas cylinder. Wait approx 1 minute
5. Check there are no leaks. See Leak Test.

### **Lighting**

1. Turn on front gas burner by pushing down the knob and rotating to high. Then push piezo ignition button until burner ignites. If ignition does not occur within 15 seconds, turn off and wait 30 seconds before trying again. (Check gas connection is correct)
2. To light rear burner turn knob to high and push piezo igniter or allow about 10 seconds for "cross lighting" to occur.
3. Flame is visible through viewing Portholes situated at each end of BBQ next to burners.
4. After use, turn off knobs and gas supply.
5. Clean using a detergent & brush (DO NOT USED A WIRED BRUSH)

Having trouble? Please carefully read all instructions.

PLEASE CONTACT THE TEAM IMMEDIATELY IF YOU HAVE ANY ISSUES

Please ensure BBQ has been cleaned and all food elements have been removed before returning. Cleaning fees may be applied.
